Academic Data Mining and Data Systems

Research Assistant with Prof. [Xinbing Wang](#) & Prof. [Weinan Zhang](#)

IIOT, SJTU

Nov. 2017 - Jun. 2019

- We build Academic Knowledge Graph (AceKG), a large-scale (3.13 billion triples) knowledge graph in academic domain. We implemented the Knowledge Graph System based on Apache Jena consisting of TDB database and SPARQL engine. We further perform entity alignment and rule based inferences to enrich the knowledge graph, which provides benchmark for NRL task. Paper is accepted by CIKM 2018.
- We propose a novel adversarial representation learning model for heterogeneous information network in the academic domain, to deal with author name disambiguation task. A generative adversarial module and self-training strategy are proposed for efficient and effective modeling. Paper is accepted by AAAI 2020.
